Derived from Copper Glucoheptonate Chelate

Green-T® Copper 5% is a chelated minor element for prevention and correction of nutrient deficiencies. Copper is involved in photosynthetic and respiration systems. It assists chlorophyll synthesis and is used in a reaction catalyst. Copper also plays a role in Vitamin A production. Though this product is not a fungicide, copper is a major player in suppression of some diseases.

The glucoheptonate chelate of Green-T® Copper 5% prevents the micronutrient from binding with other nutrients such as phosphate. By keeping the copper available for an extended period of time, the results are a long-lasting, deep green plant.
