Green-T® Micro Mix is an organically chelated micronutrient package. The glucoheptonate organic chelating agent encapsulates the micronutrients from being held by soil particles. Green-T® Micro Mix will remain available to the plant through foliar and soil applications without being tied up by soil imbalances. The minimal amount of Nitrogen helps to aid in the foliar absorption of the micronutrients.

The glucoheptonate chelate of Green-T® Micro Mix prevents the micronutrient from binding with other nutrients such as phosphate. By keeping the nutrients available for an extended period of time, the results are a long-lasting, deep green plant.
