Derived from Magnesium Nitrate and Nitric Acid

Magnesium Nitrate 7-0-0, 6% Magnesium is a liquid combination of nitrate nitrogen for greener turf and magnesium which promotes root development and enzyme activity. The nitrate nitrogen is plant available throughout the growing season, especially at cooler temperatures. Magnesium plays an important role in maintaining favorable water relations between roots and soil. Magnesium is a critical component of chlorophyll, facilitates protein synthesis, regulates enzyme proteins and phosphorous utilization, and activates enzyme activity. Magnesium aids in root development since it is involved in transporting soluble carbohydrates from the leaves to roots, rhizomes and growing points.
